## Basin Collection

As a family owned Australian business, Architectural Designer Products has come a long way since its humble beginnings in 2001. CEO Andy's creativity and drive has led ADP to become Australia's largest and most innovative bathroom furniture manufacturer.

Partnering with international manufacturers, Andy began designing basins to compliment his furniture designs. All of our basins are tried and tested to ensure we never compromise on functionality or quality.

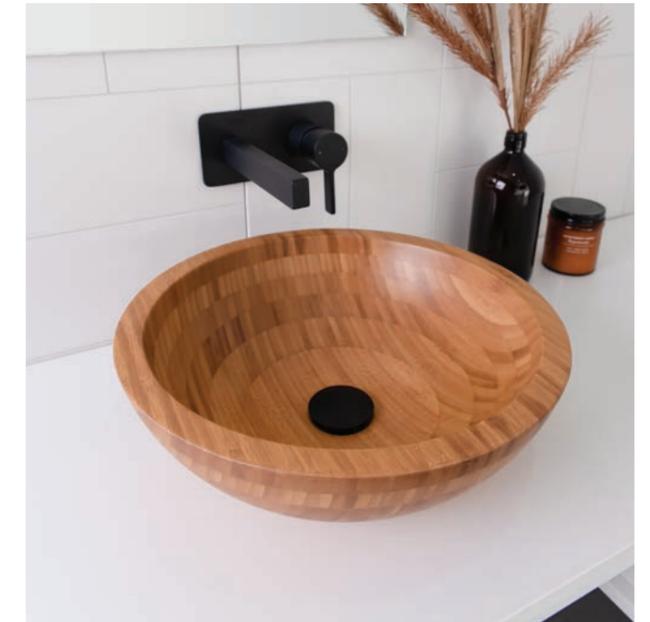

ADP's basin collection consists of a wide range of classic and unique designs to suit any Australian home. Our basins come in an array of styles, colours and materials providing you with a solution to create the bathroom of your dreams. We are proud to be in the homes of many Australians, creating functional and timeless bathrooms.

Karma Basin, page 44

# Basin Materials

Basins come in many different materials and choosing which material is best depends on how the basin will be used. Here is our guide to help you choose a basin material that is right for you and your needs.

## Ceramic

A classic choice for basins and moulded tops, Ceramic basins come in a large range of styles, from modern Above-Counter to traditional Under-Counter. Ceramic is heat resistant, easy to clean, and will not discolour over time. It has a very high scratch resistance but may be susceptible to chipping and cracking under impact. Ceramic basins have a maximum water temperature of 65°C.

## Solid Surface

Solid Surface basins come in a large selection of styles, shapes and gloss or matte finishes. They are hygienic, very easy to maintain and do not require sealing or treating. Solid surface is durable, less susceptible to chipping than ceramic, and easy to repair if scratched or chipped. The material lends itself to precise measurements with very little size variation. Solid Surface basins have a maximum water temperature of 65°C.

## Cast Marble

Cast Marble basins are known for their consistency in the surface quality, with minimal warping or imperfections. They are durable, less susceptible to chipping than ceramic, and easy to repair if scratched or chipped. Cast marble basins are moulded using a heavy polymer resin mixed with crushed marble. They are then coated with a durable gloss gel coat or matte solid surface layer. Cast Marble basins have a maximum water temperature of 70°C.

## Bamboo

Bamboo is incredibly durable, antibacterial and a sustainable material. Bamboo is a natural composite material with a high strength-to-weight ratio. The Bamboo basin radiates spa-like elegance, perfect for the luxury hotel-inspired bathroom. Bamboo basins have a maximum water temperature of 65°C.

# Basin Styles & Solutions

Choosing the perfect basin style for your bathroom is vital to help create a space that is both functional and harmonious. Here is our guide to help you choose a basin type that is right for you and your needs.

## Above-Counter

Above-Counter basins are the showstoppers of basin design. Available in a range of shapes, colours and finishes, they maximise storage inside a vanity cabinet as the basin does not protrude below the benchtop. Some designs can be used in a semi-recessed application in smaller bathrooms, to minimise cabinet depth and maximise basin size. Above-Counter basins pair best with wall taps or extended basin mixers due to their height above the benchtop. Make sure to consider the location of wall tapware when roughing in to avoid costly plumbing mistakes.

page 8

## Semi-Inset

Semi-Inset basins are visually interesting to look at because part of the basin is hidden in the cabinet, and part of it protrudes above the benchtop. They are great for floor mount vanities to keep the height of the basin to a minimum while achieving an 'Above-Counter' look. Some Semi-Inset basins include an overflow, while some others include a built-in tap landing to contain splashing and water from wet hands turning off taps. Always consider your tapware selection when using a Semi-Inset basin to ensure the height and reach of the tap matches the height of the basin.

page 63

## Inset

Create a seamless look between basin and benchtop with an Inset basin. Inset basins sit just above the benchtop, with most of the basin hidden in the cabinet. A more subtle option than an Above-Counter or Semi-Inset basin, they create an effortless flow from vanity top to basin. Inset basins work well with many tapware styles, including both basin mixers and wall taps. Available in rounded and square shapes, matte and gloss finishes, Inset Basins are a modern take on the traditional style of an Under-Counter sink.

page 92

## Under-Counter

Under-Counter basins allow you to achieve a minimalist look with a clean, uninterrupted benchtop. A classic choice, Under-Counter basins are very easy to clean, just wipe along the bench and into the basin. Most Under-Counter basins come with an overflow. Consider tapware selection with your Under-Counter basin – basin mixers should have an extended reach to clear the gap between the tap hole and edge of the basin. Be mindful of the lost storage space as an Under-Counter basin will take up more room in the cabinet than other basin alternatives.

page 92

## Semi-Recessed

Semi-Recessed basins are perfect for small bathrooms and Ensuite bathrooms as the vanity cabinet is slimmer than the basin. While the slim cabinet allows extra floor space in the bathroom, a Semi-Recessed basin protrudes out from the cabinet, meaning that you don't have to sacrifice on basin size. Consider using an Above-Counter basin with a semi-recessed application to achieve a more modern look than a conventional Semi-Recessed basin.

page 121

## Small Spaces

We offer a range of Small Spaces basins, including wall hung solutions, above counter vessels and under-counter applications. Our collection is both space saving and functional, perfect for when space is very limited.

page 128

## Wall Hung

Create the illusion of space with a wall hung basin. Perfect for commercial applications or where storage is not required, wall basins can be a cost-effective vanity solution. Wall basins are available with a range of options, including a large basin, extra bench space, or small space solutions. Make a feature of your plumbing with a bottle trap and consider pairing with a shaving cabinet or floating cabinet below the basin for additional storage.

## CARE & MAINTENANCE

If you cannot identify basin material of your product, contact your merchant or see product information at [www.adpaustralia.com.au](http://www.adpaustralia.com.au).

### CAST MARBLE BASINS

- To maintain the finish on your Cast Marble basin use only a soft cloth and weak solution of non-abrasive detergent.
- To remove scratches, marks, etc. rub gently with car cutting compound, car polish or household brass/silver cleaner.

### CERAMIC BASINS

- To maintain the finish on your ceramic basin use only a soft cloth and weak solution of non-abrasive detergent.
- Due to the glazed surface of ceramic basins, scratches cannot be repaired or removed.
- Due to ceramic being a handcrafted product that is fired at high temperatures, some visual distortion may occur. This is not a defect but can be seen to add to the beauty of the product.

### SOLID SURFACE BASINS

- Wipe clean with a soft damp cloth or sponge.
- For basic stains clean with mild detergents. For **gloss and semi-gloss** surfaces you can use a non-abrasive polish or Brasso. For **matte** surface use a scourer pad or scotch bright to maintain the matte finish.

### BAMBOO BASINS

- Use a soft dry microfiber cloth and mild detergent. Remove residual detergent with a damp cloth.
- All spills should be cleaned immediately. Dry the surface with a soft, clean dry cloth to remove all water and to reduce streaking.
- A non-abrasive household cleaner may be used.
